

Comments

→ Comments are the part of code but won't execute at runtime these

→ there are two types of comments

- Single line \Rightarrow use #

- multiline \Rightarrow use `***` or `'''`

Keywords

→ keywords are the reserve words used for particular task and we can't use the keywords as identifiers.

eg: `if`, `else`, `do`

Variable

A ~~var~~ variable is a named storage location in programming that holds data which can change during program execution.

eg: `name = "Alice"`

`Age = 25`

Rules for variable declaration

- must start with a letter or underscore
- can contain letters, digits and underscore
- no space allowed
- names are case-sensitive.
- Avoid reserved keywords.
